

JDC World Inventory Reports

Restock Report
Product Category: All
Seller 2

Today is 2024-04-18
Product Lead time: 7 days

Optimal Resupply Days or ORD: Optimal resupply days represent the ideal time frame before a product reaches its reorder point to place a new order, The aim is to ensure enough inventory arrives before the existing stock runs out, preventing stockouts and disruptions in fulfilling customer orders.

Dynamic Reorder Point or DRP is a calculation method used to determine the stock level at which a new order should be triggered, How many units are expected to be sold in the lead time (time it takes to receive new stock). This can be obtained from historical sales data or forecasting models.

ID	Title	Slug	Category	Stock	Reserve	Purchase Count	DRP	ORD	Date
1	Corsair 4000D Airflow	corsair-4000d-airflow	computer_case	10	5	1802	98	8	2024-04-17
